EDUCATION

Peking University, Intelligent Science and Technology **2024.09 – Present**

- **GPA:** 3.563 / 4.0
- **Coursework:** Computer Vision, Introduction to AI, Data Structure and Algorithm, Programming in AI, Introduction to Visual Computing and Interaction, Design and Analysis of Algorithms, Foundations of NLP

RESEARCH EXPERIENCES

[Prof. Yisen Wang](#) Research Group Research Internship **2025.09 – Present**

- My research focuses on reinforcement learning and imitation learning, with a particular emphasis on DAgger-based post-training for large language model agents, including expert-guided data aggregation, policy fine-tuning, and agent behavior optimization.

SELECTED PROJECTS

DAgger-Based Imitation Learning for LLM Agents

- Reproduced Revisiting DAgger in the Era of LLM Agents and built the pipeline for agent rollout, expert supervision, model fine-tuning, and evaluation.
- Explored improved data selection and post-training strategies for LLM agents.

Diffusion Illusion Generation and Method Improvement

- Reproduced and extended a diffusion-based illusion generation method with additional rotation and multi-image configurations.
- Improved generation quality through prompt, transformation, and optimization design.

MiniTorch: A Lightweight Deep Learning Framework from Scratch

- Implemented a PyTorch-style framework with tensor operations, automatic differentiation, neural network modules, and optimizers.
- Trained and evaluated an image classification model using the framework.
